PRODUCT DESCRIPTION
H-Shield HD is a ½” thick, high-density polyiso insulation panel specifically designed for use as a cover board. It is manufactured on-line to a premium performance coated glass facer on both sides (CGF). H-Shield HD delivers an R-value of 2.5 in its ½” profile; significantly higher than roof cover boards made with other materials such as wood fiber or gypsum.

PREMIUM PERFORMANCE ATTRIBUTES
- Manufactured with NexGen Chemistry: Contains no CFCs, HCFCs, HFCs, is Zero ODP, EPA Compliant, and has virtually no GWP
- 4 lbs/pcf high density foam core provides enhanced physical properties
- Lightweight (11 lbs per 4’x8’ panel); easy to cut, handle and install
- Sturdy constitution and durability protects the roof system from effects of hail, roof top construction traffic and other potentially damaging elements
- Achieves a UL 790 Class A combustible deck assembly rating at ½” thickness without the use of a fire-rated slip sheet or the presence of a fire barrier Insulation joints must be staggered a minimum of 12” from the combustible deck joints. Maximum roof slope = 1”**:12”
- Passed (10) ASTM D 3273 Resistance to Mold Test
- Hail Rating: SH-1 in approved assemblies

ROOFING APPLICATIONS
- Compatible with Single-Ply Roofing Systems (fully adhered and mechanically attached)
- Modified Bitumen Roofing Systems
- Suitable for use with approved fasteners and plates, also cold applied and low-rise adhesives

PANEL CHARACTERISTICS
- Available in ASTM C 1289 Type II, Class 4, Grade 1 (109 psi max)
- Available in ½” 4’ x 8’ (1220mm x 2440mm) panels
- Constructions requiring UL Class A ratings

Codes and Compliances
- ASTM C 1289 Type II, Class 4, Grade 1 (109 psi max)
- UL Classified 790
- UL Class A
- ASTM E108
- FM Approved – consult RoofNav for specific assemblies
- FM Approved 1-75
- Miami Dade County Product Control Approved
- State of Florida Product Approval No. FL 5968
- California Code of Regulations, Title 24, Insulation Quality Standard License #TI-1420
- UL Classified for use in Canada
- Refer to UL Directory of Products Certified for Canada for more details
- UL Certified for Canada, CAN/ULC-S126, CAN/ULC-S107
- CAN/ULC-S704 Type 3 Class 2

- Environmental Product Declarations
- Materials Reuse
- Recycled Content
- Construction and Demolition Waste Management
Single-Ply Systems

Ballasted Single-Ply Systems
Each H-Shield HD panel should be loosely laid as a cover board over either an existing roof system or base layers of insulation on the roof deck. Butt edges and stagger joints of adjacent panels. Install the roof covering according to the manufacturer’s specifications.

Mechanically Attached Single-Ply Systems
Each H-Shield HD panel should be secured as a cover board over either an existing roof system or base layers of insulation. Butt edges and stagger joints of adjacent panels. Install the roof covering according to the manufacturer’s specifications.

Fully Adhered Single-Ply
Each H-Shield HD panel should be secured as a cover board over either an existing roof system or base layers of insulation. H-Shield HD may be adhered to a prepared concrete deck or subsequent layers of insulation with a full mopping of hot steep asphalt, insulation adhesive or cold applied mastic. Butt edges and stagger joints of adjacent panels. Install the roof covering according to the manufacturer’s specifications.

Built Up, Coal Tar And Modified Bitumen Systems (APP, SBS)
Each H-Shield HD panel should be secured as a cover board over either an existing roof system or base layers of insulation. H-Shield HD may be adhered to a prepared concrete deck or subsequent layers of insulation with a full mopping of hot steep asphalt, insulation adhesive or cold applied mastic. Butt edges and stagger joints of adjacent panels. Install the roof covering according to the manufacturer’s specifications.

Re-Roofing Single-Ply Systems
H-Shield HD provides a singular and sustainable solution in retrofit applications when existing insulation is left in place. To facilitate compliance with ASHRAE 90.1 Standards for energy efficiency, H-Shield HD can be installed in a single layer on top of intact and dry insulation after the Single-Ply membrane is removed. Butt edges and stagger the joints in accordance with good roofing practice and fasten as per manufacturer’s specifications. The new Single-Ply membrane can then be installed over an insulation assembly that complies with the latest energy code requirements.

INSTALLATION

H-Shield HD - New Construction

H-Shield HD - Retrofit Application over BUR-Wood

WARNINGS AND LIMITATIONS
Insulation must be protected from open flame and kept dry at all times. Install only as much insulation as can be covered the same day by completed roof covering material. Hunter Panels will not be responsible for specific building and roof design by others, for deficiencies in construction or workmanship, for dangerous conditions on the job site or for improper storage and handling. Technical specifications shown in this literature are intended to be used as general guidelines only and are subject to change without notice. For more information refer to the Storage and Handling Technical Bulletin at www.hunterpanels.com, or refer to PIMA Technical Bulletin No. 109: Storage & Handling Recommendations for Polyiso Roof Insulation at www.polyiso.org.
