Hunter Panels Announces New Facility

*New Polyiso insulation manufacturing facility coming to
Sikeston, Missouri*

PORTLAND, ME - Hunter Panels is pleased to announce plans to open an innovative, state-of-the-art polyiso insulation manufacturing facility in Sikeston, Missouri. This 445,000 square foot facility will be the 50th for Carlisle Construction Materials. The new polyiso plant, CCM's eighth, will support organic growth initiatives and also create jobs for the city of Sikeston and surrounding communities.

The continued popularity of Hunter Panels roof and wall product offerings combined with rising insulation usage brought about by building code requirements, have created the need for additional manufacturing capacity in this region. The new facility represents the company's ongoing commitment to delivering a world-class customer experience. It is strategically located to better serve the central US and will result in improved service for Hunter Panels customers throughout our network of polyiso plants. The production of energy-saving insulation and reduction of shipping lanes are both central to Hunter's ESG leadership position.

Hunter Panels, headquartered in Portland, Maine, manufactures thermal efficient Polyiso insulation for roof and wall applications. Hunter Panels currently manufactures its product from seven facilities in New York, Illinois, Florida, Texas, Utah, Washington and Pennsylvania. Learn more about Hunter Panels at www.hunterpanels.com.
